

## Amiga compatible wlan cards

PCMCIA cards are 16bit and come in 3.3v and 5v versions. Cardbus cards are all 32bit and 3.3v.

The amiga only supports 5v PCMCIA cards. The free prism2.device driver by Neil Cafferkey provides support for 802.11b wlan cards on the amiga and supports WEP encryption

In may 2011 a commercial version supporting WPA (TKIP) and WPA2 (CCMP/AES) encryption became available.

See [http://amigaworld.net/modules/news/article.php?mode=flat&order=0&item\\_id=5949](http://amigaworld.net/modules/news/article.php?mode=flat&order=0&item_id=5949)

If you try out one of the cards that are not confirmed working, please drop a line to [n.cafferkey@cs.ucc.ie](mailto:n.cafferkey@cs.ucc.ie)

## Cards confirmed working

By Neil Cafferkey, from prism2.device manual

## Prism2, Prism2.5 or Prism3 (see notes)

From Linux-wlan.org

Source

[www.linux-wlan.org/docs/wlan\\_adapters.html.gz](http://www.linux-wlan.org/docs/wlan_adapters.html.gz)

**Note 1:** The source does not specify prism version. Prism 2 and 2.5 works, but Prism 3 does not.

**Note 2:** Here is what Neil added: AFAIK the vast majority of 802.11b Prism cards are Prism 2 or 2.5.

I've never heard from anyone who bought a Prism 3 card by mistake for instance. I don't know when they stopped making them exactly. It's unlikely I'll support Prism 3, simply because they're so rare.

**Note 3:** Cards labeled Orinoco and Agere are in fact Prism cards as well
